## Maritime Regional Turf Spray Program

### Greens and Fairways – Cool Season

With this geography-specific spray program, superintendents have a customized rotation management plan for disease control. Be sure and include these important rotations in your plan and have strong, resilient turf all year long.

- Intrinsic® brand fungicides, like Lexicon®, Honor® and Insignia® Pro, provide effective disease control and **Plant Health Benefits\***, including stronger, deeper roots and higher stress tolerance
- New Lexicon fungicide is a powerhouse broad-spectrum, dual active fungicide providing proven protection against patch diseases, anthracnose, dollar spot and microdochium patch
- Insignia Pro fungicide combines two trusted active ingredients for long-lasting snow mold control
- Maxima® fungicide delivers long-lasting disease control of key diseases at any temperature for flexibility and year-round confidence
- Xzemplar® fungicide offers the broadest spectrum control of any SDHI available in Canada, protecting against dollar spot, microdochium patch, summer patch, brown ring patch and leaf spot

\* Plant Health Benefits refer to products that contain the active ingredient pyraclostrobin.

## Maritime Region

Depending on seasonal weather conditions in this area, disease pressure generally begins in April and ends in late October. Anthracnose, dollar spot and microdochium can persist throughout most of the season, while pythium, fairy ring and patch disease pressure is concentrated in the summer months. Periods of intense disease pressure in-season are common and can persist for a significant amount of time.
